

Sharing The Planet Summative assessment Task

Central Idea - Marine life can thrive in a clean and healthy ocean environment

You are going to make 2 trioramas. One will show a healthy ocean environment and the other will show an unhealthy ocean environment. After you have completed your art project, you will present it to either a small group, your teacher or the class (your choice).

Be sure to refer to the checklist below as this is what your teacher will be assessing you on.

You will then self/peer reflect using a method you are familiar with (e.g. Found Out and Made me Think)

Have you...	student check	teacher check
Identified the marine plants/animals in your triorama and commented on their physical features		
Explained how the physical features of the marine life in your triorama are suited to their habitat		
Explained the different ways marine life depend on one another to survive, giving examples		
Given examples of how human actions can affect the marine environment		
Given examples of some choices people can make to help conservation efforts
